

NETFLIX

Netflix Movies and TV Shows

About this Dataset: [Netflix](#) is one of the most popular media and video streaming platforms. They have over 8000 movies or tv shows available on their platform, as of mid-2021, they have over 200M Subscribers globally. This tabular dataset consists of listings of all the movies and tv shows available on Netflix, along with details such as - cast, directors, ratings, release year, duration, etc ¹.

Other than the dataset and description (above) given, the tasks, descriptions under the tasks, and summaries are all written and created by me.

Tasks:

1. Give an updated list removing all the blank spaces in the cast and director(s) column.
2. How many movies came out in 2021 vs. 2020, and vs. 2019?
3. How many TV shows between those same years?
4. How has Netflix been impacted by COVID-19?
5. What is the rating distribution like?
6. What month is the most movies and TV shows released in 2017, 2019, and 2021?
7. What TV shows on Netflix only lasted one season?
8. What type of genre is the most popular in both movies and TV shows?
9. How many TV shows were created outside the United States, and what countries are they?

The `netflix_titles.csv` contains the following headers:

```
show_id  type  title  director  cast  country  date_added  release_year  rating  duration  listed_in  description
```

In [1]:

```
import csv

netflix_type = []
netflix_title = []
netflix_director = []
netflix_cast = []
netflix_country = []
netflix_date_added = []
netflix_release_year = []
netflix_rating = []
netflix_duration = []
netflix_listed_in = []
netflix_description = []

with open('netflix_titles.csv', encoding="utf8") as netflix_titles:
    netflix_reader = csv.DictReader(netflix_titles)
    for row in netflix_reader:
        #print(row['title'])
        netflix_type.append(row['type'])
        netflix_title.append(row['title'])
        netflix_director.append(row['director'])
        netflix_cast.append(row['cast'])
        netflix_country.append(row['country'])
        netflix_date_added.append(row['date_added'])
        netflix_release_year.append(row['release_year'])
        netflix_rating.append(row['rating'])
        netflix_duration.append(row['duration'])
        netflix_listed_in.append(row['listed_in'])
        netflix_description.append(row['description'])

netflix_show_id = []
for number in range(0, len(netflix_title)):
    #print(number)
    netflix_show_id.append(number)

#print(netflix_director)

#The 'netflix_titles.csv' is now imported into the notebook as 'netflix_reader' with UTF-8 encoded.
```

Here we are printing out all the movie titles from the `netflix_titles.csv` document as an example to ensure each column was added into a list (type, title, director, cast, country, etc.).

Now the movie titles are in the `netflix_title` list.

In [4]:

```
#This is to check to make sure it's printing out correctly.
for title in netflix_title:
    print(title)
```

1. Updated List of Movies and TV Shows

We want an updated list removes all the blank spaces in the **director** and **cast** lists from the `netflix_titles.csv`. After getting rid of the empty spaces in the lists: `netflix_director` and `netflix_cast`; we will create a dictionary that contains the `netflix_show_id`, `netflix_title`, `updated_netflix_director`, `updated_netflix_cast`, and `netflix_release_year`.

In [117]

```
def update_movie_list():

    updated_netflix_director = []
    updated_netflix_cast = []
    netflix_dictionary = {}
    updated_movie_list = []

    for index in range(0, len(netflix_show_id)):
        #print(index)
        netflix_dictionary.update({
            "ID": netflix_show_id[index],
            "Type": netflix_type[index],
            "Title": netflix_title[index],
            "Director(s)": netflix_director[index],
            "Cast": netflix_cast[index],
            "Year Released": netflix_release_year[index]
        })
        #print(movie_dictionary)
        #print("")

        updated_movie_list.append(netflix_dictionary.copy())
        #print(movie_list)

        #This removes the dictionary if it doesn't contain a director or directors.
        updated_movie_list = [director for director in updated_movie_list if director['Director(s)'] != '']
        #This removes the dictionary if it doesn't contain any cast members.
        updated_movie_list = [cast for cast in updated_movie_list if cast['Cast'] != '']

        #print(movie_list)
        for dictionary in updated_movie_list:
            print(dictionary)
            print("")

    update_movie_list()

The data above now shows the updated list of movies and TV shows that only contain cast members, and a director(s); meaning there won't be any blank slots in the cast members or directors column.

2. Number of Movies That Came Out in 2021, 2020, and 2019

We want to know how many total movies were released* in those three years, and which year had the most movies added to Netflix. For this question, the `updated_movie_list` will not be used as we want to know **all** the movies that came out during those 3 years, regardless of if there's any cast members or director(s) or not.

*This does not mean the movie was produced and released that year, but just released on Netflix.

In [6]:

 In 2020, 517 movies came out.
 In 2019, 633 movies came out.

3. Number of TV Shows That Came Out in 2021, 2020, and 2019

Just as the previous question above, now we want to know the TV shows that were released* during those 3 years. We will continue to use the `netflix_title` list, as we want the most accurate number.

*Due to how Netflix releases TV shows, each new season will also be considered as "newly released". So this data is based more on when the most recent season was released, not necessarily the entire TV show itself.

plt.title("Number of TV Shows Released vs. Number of Movies Released")
plt.xlabel("Year Released")
plt.ylabel("Number of Netflix Titles Released")

#This shows the value on top of the bars
for index, value in enumerate(y):
    plt.text(x_axis[index] - 0.25, value + 5.0, str(value))

for index, value in enumerate(y_2):
    plt.text(x_axis[index] + 0.13, value + 5.0, str(value))

plt.show()
```

Summary

Based on the data from the two questions above (from both movies and TV shows), Netflix had released many movies and TV shows because of the lockdown; making it very easy for people to access their content.

In **2019**, it's suggested that because of the lockdown, it was very difficult to continue filming TV shows, therefore, there wasn't a lot of TV shows that were released during 2019; but many movies (not necessarily released that specific year), both old and new, were able to be released.

In **2020**, after the lockdown had been lifted; filming for TV shows and movies were able to resume, allowing for Netflix to go ahead and release more TV shows that were originally on hold. Since there were more TV shows released, it seems like Netflix didn't need to worry about releasing as many movies as the previous year.

In **2021**, it has simply been the same as the year 2020. There has been more TV shows than movies that have been released, however, there has been a lower count of both TV shows and movies during this year, which may be due to other streaming services pushing out more content.

We could assume that 2019 was the best year to release content for both movies and TV shows, however, movies would do a lot better than the TV shows.

5. Rating Distribution in Movies and TV

We want to know how the ratings: TV-MA, TV-14, TV-PG, TV-G, TV-Y7, TV-Y are distributed in TV shows; and the ratings: R, PG-13, PG, G, NR, UR for movies*.

| | TV Show Rating | Movie Rating |
|-----------------------------|----------------|--------------|
| For Mature Audiences | TV-MA | R |
| For 14+ | TV-14 | PG-13 |
| Parental Guidance Suggested | TV-PG | PG |
| For All Ages | TV-G | G |
| For Children 7+ | TV-Y7 | |
| For Young Children | TV-Y | |
| | | NR |
| | | UR |
| | | Not Rated** |
| | | Unrated*** |

We will be using `netflix_type` and `netflix_rating` to determine how many movies and shows in the industry have been marketed to difference age groups.

*TV ratings are assigned by the *TV Parental Guidelines*, while movie ratings are done by the *Motion Picture Association of America (MPAA)* in the United States. Different countries will have their own rating system, but due to the data, we will be using the American standard.

****Not Rated** means that it has not yet been rated by the *MPAA*. This does not mean it is necessarily worse than an 'R' rating; many International Films tend to have a 'NR' rating.

*****Unrated** means it contains scenes that were cut from the movie that might have earned a stricter rating by *MPAA*.

TV Ratings

Movie Ratings

Summary

Now that we have the data and graph, we can see that almost half of the TV ratings are 'TV-MA', and more than half of the movie ratings are 'R'; which are meant for mature adults. Although there are some movies and shows for a younger age range, it is recommended for those who are younger than 13 should not use Netflix.

We could safely assume that Netflix is supposed to be a streaming service meant for those who are 17 and older, with some TV shows and movies meant for those 13 and older.

6. Find the Most Popular Month for Released Movies in 2018

In order to find the most popular month, we will be using `netflix_date_added`; and since we are only finding the movies most popular release month, we will need to use `netflix_type` as well. All we want to see, is which month(s) in **2018** was the had the most movies released.

```

Summary

As we can see from the data above, **October** was the month where the most movies were released on Netflix. It seems like **October, November, and December** all have very high numbers when movies were released on Netflix; which we could assume that Netflix was releasing more movies due to the winter holidays, so viewers would have plenty of options to watch.

March came in the second highest, which could easily be due to prepare for the upcoming summer months when many viewers are no longer in school, making it more easier for them to have many options to watch when the summer arrives. **July and August** also have a high count of movies released, which could also be due to the summer months.

Surprisingly, **June** has the lowest number of movies released even though June is the month that is considered to be the beginning of summer vacation.

7. TV Shows That Only Have One Season

We are going to create a list to figure out what TV shows have **one season*** using `netflix_titles` and `netflix_duration`. It would also be useful to include the amount of shows that have one season as well.

*This is **not** TV shows that lasted **only** one season, but TV shows that have only one season so far. There may be more seasons for some of them in the future (or not), but as of now with the data, it will only be shown as having one season.

In [114]:

```
count_seasons_tv = []

def one_season_tv():

    tv_show_list = []
    one_season_list = []
    one_season_dict = {}

    count_one_season = {}
    count_rest_tv = {}

    for index in range(0, len(netflix_show_id)):
        one_season_dict.update({
            "Title": netflix_title[index],
            "Type": netflix_type[index],
            "Duration": netflix_duration[index]
        })
        #print(one_season_dict)
        tv_show_list.append(one_season_dict.copy())
    #print(tv_show_list)

    tv_show_list = [tv for tv in tv_show_list if tv["Type"] == "TV Show"]
    #print(tv_show_list)

TV Show Seasons

Summary

From the data and graph, we can see that there are 1,793 TV shows (67%) listed, which is the majority, that have a duration of at least one season compared to the 883 TV shows (33%) that have two or more seasons.

So from this data, we could assume that most of the TV shows that are released on Netflix will mostly likely have only one season, with a small chance of having another season.

8. Find the Most Popular Genre of Movies and TV Shows

We want to find what was the most popular genre in both movies and TV shows. We'll be using `netflix_listed_in` to find the different genres; and because there are multiple genres listed to each TV show and movie, we will only be taking the first genre listed and using that to create the data.

Also, since we're finding both movies and TV shows, we'll need to use `netflix_type` as well.

Summary

In the *TV Show Genres* graph, it is shown that a majority of TV shows are part of the **International TV Shows** genre; while in the *Movie Genres* graph, the majority of movies are in the **Dramas** genre with **Comedies** coming in close to Dramas. Therefore, we could safely assume that a TV show released onto Netflix will most likely be an international TV show; while a movie released onto Netflix will most likely be a drama or a comedy*.

*It must be noted that in the TV Show category, there was a *TV Show* genre which was deleted because "TV Show" is not a genre; however, it may be that many TV shows were put into that category. In the Movie category, there was also a genre called "Movie" which was deleted as well.

9. Find TV Shows That Were Created Outside the United States.

We want to know what TV shows were created and filmed from other countries other than the United States; as well as finding out how many TV shows each country has released on Netflix. We will need to use `netflix_country` to find the different countries*. Also, since we are only finding TV shows, we will need to use `netflix_type` to remove all the movies as well.

*Because there are some Netflix titles that have more than one country where it was filmed, we will only use the first country listed as the first country is where the majority of the movie was filmed.

TV Shows on Netflix Outside the U.S.

Summary

Based on the graph, the United Kingdom has the most TV shows on Netflix, with Japan coming in second, and South Korea coming in third. However, I will note that if you add all the East Asian countries together (Japan, South Korea, Taiwan, China), you'll have at least 450 TV shows in the *East Asian* category.

So therefore, we could safely assume that there will be a high chance a TV show released on Netflix will be from the United Kingdom; or an East Asian country, most likely Japan or South Korea.

¹ Data and description are written by Shivam Bansal; which is provided by [Kaggle](#).
